

# Storage System by Master Klark

Order at home = order in life

**Feel inspired by the state-of-the-art storage system at home and in an office**

Mesh storage system is a state-of-the-art, high technology and innovative solution to arrange the space around you. Use the whole system or select the elements you are interested in to complement and improve your cabinet furniture

### **Master the space!**

Use the system to arrange the storage space in your home in the best possible way.

### **Assemble easily, effortlessly and cheerfully!**

Assemble the system as an erector set. Do you need any extra baskets, rails or shelves to accommodate new clothes? Easily add everything you want.

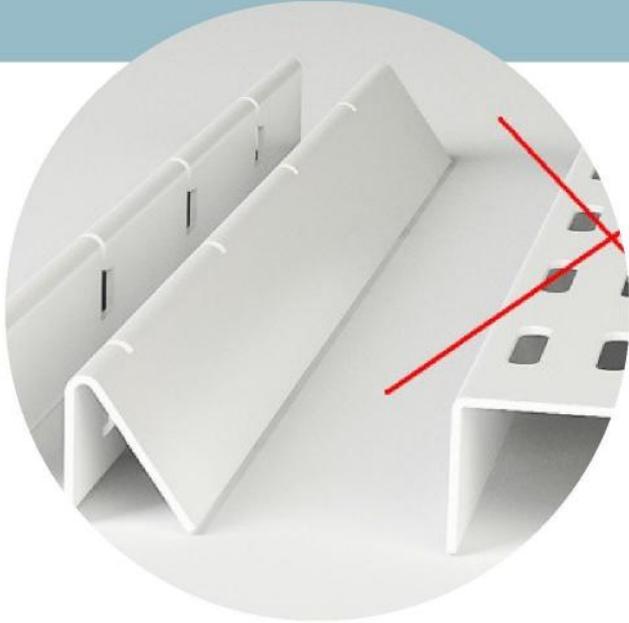

### **Keep fresh!**

Be sure your clothes are fresh with our mesh elements that ensure natural air circulation in fabrics.

**We believe order makes a difference!**

Master Klark LLC

# BENEFITS OF OUR STORAGE SYSTEM

## Stability

A profile is closely connected to a frame due to its special shape so as to avoid slop and make the whole structure solid and stable, as well as to prevent floating and deformation of the elements

## Great Exterior

Unlike existing profiles with square holes associated with a display in a cheap supermarket, holes in our profiles are practically invisible and unusual smooth lines create a streamline form without right angles

## Durability

Mesh products will never get loose, as there are no bolted joints. Metal is stronger than wood, coating of the mesh products is stronger than of the laminated chipboard, and zinc coating hardly ever wears away

## Quality

We use the high technology equipment to ensure quality of the decorative finishing and accuracy of the manufactured products

# BENEFITS OF OUR STORAGE SYSTEM

## Natural Ventilation

Mesh baskets and shelves ensure natural air circulation to keep your clothes fresh. Drawers and shelves made of laminated chipboard do not circulate the air and emit harmful formaldehydes.

## Safety

All system elements are made of eco-friendly materials, they do not emit phenols, formaldehydes and other harmful substances, so they are absolutely safe for both children and adults.

## Ergonomics

Efficient and practical use of the space due to products diversity and versatility.

## Visually Enlarged Room

The storage system saves space, as there are no massive closets. Everything is visually available

## Favorable Price

When buying from a Russian manufacturer a customer is not required to pay for logistics; reliability and durability will be a good investment.

# BENEFITS OF OUR STORAGE SYSTEM

## Easy to Install

All system elements are designed in compliance with the best design practices to ensure easy assembly. No special skills required for installation. We did our best to make the assembly process as close to the “do-it-yourself” principle as possible.

## Reliability

Only high quality steel manufactured according to the GOST is used. High strength of the steel products is achieved due to steel thickness and grade, thus they carry heavy loads unlike the products of our competitors.

## Modernization

The system is designed in such a way so as to be easily transformed and complemented with any other elements depending on the changing environment. In case of moving to another place the system can be easily dismantled and re-installed.

## Versatility

Ways of the system use are unlimited, it serves for any premises and can be built in any niche; the wide product range sets no limits on customer’s imagination.
